

Classification – reaction to fire

Whereas in the system of classes contained in Decision 94/611/EC, the category 'No contribution to fire' was established with a view to covering products which do not need to be tested for their reaction to fire and which are referred to as Classes A in Tables 1 and 2 and, additionally, in Table 1 as 'list of non-combustible products';

Whereas Article 20 (2) of Directive 89/106/EEC indicates the procedure to be followed for the adoption of the provisions necessary for the establishment of classes of requirements in so far as they are not included in the interpretative documents;

Whereas the measures provided for in this Decision are in accordance with the opinion of the Standing Committee on construction,

HAS ADOPTED THIS DECISION:

Article 1

The materials, and products made from them, that are listed in the Annex to this Decision, shall, on account of their low level of combustibility and subject to the conditions also set out in the Annex, be classified in Classes A ('No contribution to fire') as provided for in Tables 1 and 2 of the Annex to Decision 94/611/EC.

For the purpose of this classification, no reaction-to-fire testing of those materials and products made from them shall be required.

Applicable on following of Expolinc Products*

Roll up classic
4-screen classic
Pop up magnetic structure
Aluminum profiles
Soft image structure
Pole system
Stand up frame

* does not include graphic panels.
